

Run The Application

If we will run our flask application.

Run The app in local browser

- Open anaconda prompt from the start menu
- Navigate to the folder where your python script is.
- Now type “python app.py” command
- Navigate to the localhost where you can view your web page

Then we will run on localhost:5000

Navigate to the localhost (<http://127.0.0.1:5000/>) where you can view your web page.

Let's see how our home.html page.

When “Info” button is clicked, localhost redirects to “intro.html

- And Upload the image and click on Predict button to view the result .
