Prerequisites

We successfully complete this project require following software's , concepts and packages

- Anaconda navigator:
    We can   download the anaconda navigator and install their following instructions
and also download python
- Python packages:
    - To open anaconda prompt as administrator
    - And Type "pip install tensorflow" (make sure you are working on python 64 bit)
    - If we Type "pip install opencv-python"
    - And Type "pip install flask" .
    - Now the packages are successfully installed.
